Silica Resources Australia will publicly release dust monitoring data and monitoring sites

28 September 2026: Silica Resources Australia has committed to publicly release its dust monitoring data and dust monitoring sites for the Mourilyan Silica Project at Stephenson Road, Kurrimine Beach and stockpile area at the Port of Mourilyan.

CEO and Managing Director Rob Tindall said, “the safety of our people and community is our priority.”

“As part of our commitment to transparency and respectful engagement with the community, we will be publicly releasing our dust monitoring data interpreted by Dr Keith Adam, and dust monitoring sites.

Dr Keith Adam, a Senior Specialist in Occupational and Environmental Medicine, has been engaged by Silica Resources Australia as an independent third-party specialist reviewer for silica and dust related workplace health and safety and environmental dust monitoring.

“SRA is acutely aware of silicosis issues and has designed the project to remove the risk where possible, said Mr Tindall.

“The risk posed by silicosis is avoided as SRA will remove all silica from the product less than 75 microns and runs a wet process to ensure fine silica particles and dust are not included in the mining process. Any smaller size fraction is passed wet into geotube bags.”

“SRA is committed to the highest global standards and is a founding member of the global Coalition for Responsible Sand and Silicates.”

Dr Adam said, “The fraction of crystalline silica which is <10 micron, is considered potentially respirable; this is the fraction that can enter the lungs and cause irritation and inflammation, with long-term exposure potentially causing silicosis and lung cancer.”

“I have reviewed the SRA dust monitoring data and it shows no exceedances to the standards.

“Going forward, I will be providing information for the community on how to interpret the dust monitoring data and what it means”.

Silica Resources Australia has committed to release the dust monitoring data and the monitoring sites publicly by the end of November 2026. There is no requirement to release the data publicly; SRA is releasing the data in the interests of transparency.

Community members with questions related to the project are encouraged to contact SRA on: 1800 SILICA (174 542) or info@silicaresources.com.au

About SRA:

Silica Resources Australia (SRA) is a 100% Australian-owned company delivering a strategically significant critical minerals project. With a commitment to operational transparency, SRA is developing a fully permitted silica project that supports local industry, leverages existing infrastructure and contributes meaningfully to regional economic growth and diversification.

Located in Far North Queensland, the Mourilyan Silica Sands Project is already underway, with Stage 1 operations extracting high-purity silica from a former 20 plus years quarry site. Backed by long-term investment, compliance-driven environmental planning and community-first engagement, SRA is not only advancing a critical input for the global energy transition, defence and technological innovations but doing so in a way that reflects Australian values: responsible development, job creation and lasting local benefit.

With a strong focus on excellence across everything it does, developing regional partnerships and infrastructure efficiency, SRA is positioning itself as a trusted, transparent and forward-looking player in Australia's critical minerals landscape, supporting sustainable growth and prosperity across the Cassowary Coast and beyond.
